

Writing Question

Do you think renewable energy will become the main source of power in the future? Why or why not?" Instructions: Write a short essay (about 100- 150 words). Explain your opinion and provide at least two reasons to support it.

Sample Answer 1

I believe that renewable energy will become the main source of power in the future. First, renewable energy such as solar and wind power is clean and does not produce harmful gases. This is very important because global warming is one of the biggest problems in the world today. Second, renewable energy is sustainable. Unlike oil or coal, which will run out someday, sunlight and wind will never disappear. Many countries are already investing in renewable energy, and new technology is making it cheaper and more efficient. Although it may take time to replace traditional energy completely, I am confident that renewable energy will be the main source of power in the future because it protects the environment and supports a sustainable society. (125 words)

Sample Answer 2

I do not think renewable energy will become the main source of power in the near future. One reason is that renewable energy depends on the weather. For example, solar power cannot produce electricity at night or on rainy days, and wind power is weak when there is no wind. Another reason is that building renewable energy systems is still very expensive compared to traditional energy like coal or natural gas. Many developing countries cannot afford such costs. Of course, renewable energy is important for the environment, but I believe it will take a long time before it can replace fossil fuels completely. (124 words)
